

# Online community for telehematological and other telemedical consultations

Rijeka - Croatia, 24th April 2003

*Dear colleagues,  
Dear collaborators in telemedical consultations,*

*Initiated as the first Croatian telehematological service, the Online community offers different collaborative options in the remote management of hematologic patients.*

*Our objectives are closely related to diagnostics, treatment and follow up, improving the quality of life, as well as medical practice in remote medical institutions.*

*The Online community tends to integrate the existing telehematology practice with telepathology, teleradiology and other telemedical systems, while the community **mailing list – Telehematology & Telemedicine at [groups.yahoo.com](mailto:groups.yahoo.com)** serves as an open forum for joint education, evaluation and development of telehematological systems and services.*

*Registration forms and shortlisted guidelines for teleconsultations within the community are available in English. An open proposal of technical, medicolegal and ethical guidelines has been published in Croatian.*

*In case you are interested in using this service, either for hematological or interdisciplinary consultations, in order to improve the follow-up of patients travelling to Croatia or get a second opinion, please contact us by email.*

*Yours sincerely,  
Mirjana Sever-Prebilic, MD PhD*
